EDUCATION

Bachelor of Science

Computer Science

Florida Institute of Technology

📅 August 2019 - May 2023

Awards

- Magna Cum Laude

SKILLS

Proficient

- C# / .Net
- C, C++

Prior Experience

- Blazor
- JavaScript, JQuery
- Ruby, Rust, Python
- Docker, OpenStack
- Network Traffic Analysis

EXTRA CURRICULAR/ ACHIEVEMENTS

- President, Upsilon Pi Epsilon (computing honor society)
- Webmaster, Phi Eta Sigma (honor society)
- FITSEC - Cybersecurity Club
- National Cyber League, Platinum Medal
- CAPE Merit List, 8th place in region for Information Technology

CAREER OBJECTIVE

Self-motivated software engineer, devoted to continuous learning and enhancing codebases for peak performance. Committed to delivering excellence for both company and clients through innovative solutions and a proactive approach to improvement.

WORK EXPERIENCE

Associate Software Engineer

Computer Task Group (CTG)

📅 February 2023 - current 📍 Florida

- Enhanced efficiency in AGILE environment by refactoring Inventory Control System for a prominent US food and beverage company.
- As a key member of the ecommerce team, specialized in integrating shipping and order management features based on client requirements.
- Proficient in creating comprehensive documentation, including test plans, design docs, deployment notes, and conducting code reviews.

Research Assistant

Florida Institute of Technology

- Implemented diverse DNS servers, incorporating DOT, DOH, and DNSSEC, leveraging NFV/SDN concepts.
- Collaborated on joint research with FIU, deploying these servers on their 5G testbed. Conducted experiments to compare and contrast DNS security measures.

Computer Science Tutor

Florida Institute of Technology

- Mentored undergraduate students in courses including but not limited to Fundamentals of Programming 1 & 2, Intro to C++, Data Structures and Algorithms, Operating Systems.

PROJECTS

Metasploit Module

- Developed a specialized module for the open-source Metasploit framework, enabling users to seamlessly retrieve bookmarks on the target machine post-exploitation. Tailored for Chrome, Edge, Explorer, and Opera

Autonomous Exploit Generator

- Collaborated with a reverse engineering team developing a tool for discovering and exploiting vulnerabilities using utilizing concepts like return oriented programming, format strings and symbolic execution.

Windows Keylogger (Stealthy)

- Implemented MITRE ATT&CK Framework concepts to create a stealthy keylogger, evading virus detection, establishing persistence, and incorporating techniques such as program partitioning and assembly for execution. Currently expanding functionality to support the execution of arbitrary commands
