EXPERIENCE

Associate Software Engineer

Feb 2023 to Present

Computer Task Group (CTG)

Refactored the control system in an AGILE environment for a major US food and beverage company. Enhanced shipping/ order management features & also automated critical manufacturing processes. FullStack development, involving third party API integration, SDLC documentation & providing technical support for bugs in production.

Research Assistant (Cyber Security)

Jan 2023 to May 2023

Florida Institute of Technology

Implemented diverse DNS servers (DOT, DOH & DNSSEC). Conducted experiments to evaluate security and efficiency. Leveraged OpenStack's cloud computing platform to implement NFV and SDN technologies. Collaborated with Florida International University on joint research, deploying these servers on their 5G testbed.

Computer Science Tutor

Feb 2022 to Dec 2022

Florida Institute of Technology

Mentored undergraduate students in various CS courses, including Fundamentals of Programming 1 & 2, Intro to C++, Data Structures and Algorithms, and Operating Systems.

EDUCATION

Bachelor of Science : Computer Science

May 2023

Florida Institute of Technology

- ★ Magna cum laude
- ★ Upsilon Pi Epsilon (ΥΠΕ) (Honor Society) - President
- ★ Phi Eta Sigma (ΦΗΣ) (Honor Society) - Webmaster

SKILLS

- ★ **Programming Languages:** C#, .NET, C, C++, Python, Rust, Ruby
- ★ **Web Development:** Blazor, Svelte, HTML, CSS, Vanilla JS, WordPress
- ★ **Cloud Computing:** OpenStack, AWS (EC2, S3, Lambda, APIGateway, DynamoDB, IAM, CloudFront)
- ★ **Additional Skills:** Git, PostgreSQL, MetaSploit, WireShark, Ubuntu, Kali Linux

PROJECTS:

- ★ **AWS Cloud Resume - (Svelte, HTML, CSS, JS, S3, DynamoDB, CloudFront, Lambda, APIGateway)**
 - Built a state driven, single page web app with the Svelte framework - using AWS for cloud services. S3 for static hosting, Cloudfront for efficient distribution, Lambda and APIGateway for serverless functionality. I set up my CI/CD pipeline using github actions coupled with a secure AWS IAM user.
- ★ **Metasploit Framework Module - (Ruby)**
 - https://github.com/rapid7/metasploit-framework/blob/master/modules/post/windows/gather/get_bookmarks.rb
 - Contributed to the open source metasploit framework by building a post-exploit module that enables the user to retrieve browser bookmarks from compromised machines running Chrome, Edge, Explorer or Opera.
- ★ **Stealthy Keylogger - (C, Python)**
 - Implemented MITRE ATT&CK Framework concepts by building a keylogger which evades virus detection and establishes persistence - by partitioning and reassembling itself before execution.
- ★ **Autonomous Exploit Generator - (Python)**
 - Collaborated with a reverse engineering team to build a tool which exploits vulnerabilities in executables leveraging concepts such as return oriented programming and symbolic execution.
